Human Body Systems

The systems of the human body are organ systems. Each system is made up of organs, parts of the body with clearly defined functions. For example, your stomach is an organ. Your stomach works closely with other organs—your mouth, your esophagus, your liver, and your intestines. These organs are all parts of your digestive system. Each one of these organs has a specific function to perform as part of your digestive system’s overall job, breaking down your body’s food.

A **topic sentence** is one sentence, usually the first, that tells the main idea, or what the paragraph is mostly about.

A **concluding sentence** is one sentence, always the last, that wraps up the paragraph. It does not introduce new information. Often, it restates the topic sentence.
